Miles from other waters.

The islands of Fili are the definition of remote. Located thousands of miles from the nearest industrialized continent, a virgin ecosystem sits at the edge of a primitive rainforest. Here, rainfall filters through ancient volcanic rock over hundreds of years. Through this natural filtration process our water gathers silica, an essential mineral that contributes to our soft, smooth taste. Finally, it collects in a natural artesian aquifer, where it is preserved and protected from external elements. Water, without a drop of civilization.
